

User intent enters through multiple channels

CLI (TUI)

Web UI

Slack / Telegram / Lark

Webhooks /
Scheduled Triggers

CONTROL PLANE

Portal

curate agents, catalogs, auth, channels

Specialist Agents (N)

Workload Troubleshooter • Network Expert • Volcano Batch Specialist • ...

Skills

core / global
/ personal

Knowledge

versioned
md wiki

MCP servers

Credentials

clusters +
SSH hosts

Gateway

runtime orchestration

Sessions

Spawner

WebSockets

Cron

Triggers

Shared DB

MySQL
(production)

SQLite
(local)

*control-plane
state + history*

session starts (spawn per user)

AgentBox

— one isolated session per user

Agent Brain

pi-coding-agent + Claude SDK • deep investigation engine

read-only: investigates, never mutates

Skills

preloaded from
Portal (g/team/personal)

Tools

bash, kubectl (ro),
MCP, mem/knowledge search

Memory

investigation traces,
chunks, embeddings

Knowledge cache

materialized
wiki pages

Read-only investigation targets (outside Siclaw)

read-only access

Kubernetes

Prometheus / Grafana
ES / Loki

Alertmanager /
PagerDuty

SSH hosts

MCP extension
servers

Deployment modes

- TUI standalone
- TUI + Local Portal
- Gateway + LocalSpawner
- Gateway + K8sSpawner

local: shared FS • prod: pod/user + mTLS

Security (6-layer)

- OS sandboxing (dual-user)
- setgid kubectrl
- command whitelisting
- output sanitization

TUI pairing

local Portal over loopback +
dedicated secret becomes the
read-only source of truth
